W&L Subaru Automotive Dealership

Growing Demand and Brand Expansion

Designed in partnership with W&L Subaru and Subaru Corporate, this new 43,000-square-foot facility is a direct response to a growing demand for sales and service. Our design creates a cutting-edge environment that prioritizes both customer experience and brand expansion. The dealership's core features include a ten-car showroom, 18 service bays, and private negotiation spaces engineered for a superior customer journey. Every detail was considered to enhance the visit, from a comfortable waiting lounge with refreshments and a children's play area to advanced amenities like a car wash, quick-check alignment machines, and ample parking.

Commercial Architecture

Pinpoint Federal Credit Union New Branch Office

A Modern Headquarters Reflecting a Growing Brand

This 4,200-square-foot building serves as the corporate headquarters for the Credit Union, designed to showcase a “cutting-edge” aesthetic that reflects the client’s evolving brand. Beyond providing functional office space, the building acts as a visual landmark and marketing asset for the surrounding area. Security was a key design consideration, with the layout carefully planned to protect staff and visitors while maintaining a welcoming, professional atmosphere. The result is a building that balances innovation, safety, and brand presence.

Black Desert Resort

Mixed-use Retail + Resort & Hospitality

600-acre resort with a backdrop of red rock & Snow Canyon

The resort's primary focus is world-class golf, complemented by a unique suite of amenities and features designed to enhance the experience for all guests. Central to the resort's planning from its inception was the concept of a "boardwalk" or urban-like core. This boardwalk serves as the main artery, providing an outdoor shopping, dining, and live event space that physically and conceptually connects the resort's North and South districts. A key feature of this central area is planned commercial office space, strategically designated to house the LPGA headquarters, underscoring Black Desert's golf-oriented identity.

The Grove at Thomson Farms

Apartments

A 60-acre master-planned development centered on innovation and efficiency.

For its first phase, Thomson Farms addressed a complex residential program by developing a unified, repeatable building footprint. This strategic design solution minimized costs, accommodated unit diversity, while maximizing both density and open space. By prioritizing intelligent site planning, we created a unique central "grove" and high-quality interiors defined by abundant natural light and resident-focused storage, all achieved within the project's original fiscal parameters. Thomson Farms consists of 300 units that include studios, 1-bedroom, 2-bedroom, and 3-bedroom unit types.

Sandy City Center
Office Building

Revitalization for Sandy City Center

Arbor Plaza is designed for multi-tenant occupancy, offering a professional and functional environment typical of contemporary suburban corporate architecture. The building is comprised of two stories with a central lobby that includes a monumental stair and elevators for Class A office. The building totals approximately 66,000 square feet and accommodates mixed-use retail and office at the street level with all of level 2 dedicated to office space. The design emphasizes and supports Sandy City Center material palette and reinforces streetfront and pedestrian access all of which were project goals in aligning with the architectural standards of the vibrant Cairns Redevelopment Area in Sandy.

Mountain Valley Village

Master Planning - Mixed-use Development

Centered on community and revitalization.

Richfield prioritizes community and place creation. Its historic downtown and main street lack vitality, necessitating comprehensive revitalization. The goal is to establish a strong destination point to support residents and attract new demographics and investment. Mountain Valley Village is the strategic, mixed-use solution. It aligns with transportation and density mandates by reinforcing main street, ensuring connectivity, and creating a sense of arrival. Success was driven by the strategic layering of density, diverse housing types, a higher-density core, and placemaking anchored by defined nodal clusters and the regional identity of ‘Mountain Valley’.

Commercial Architecture

South Bridge Center
Shell Retail + Tenant Improvement

Shopping center as a destination and place maker.

Pad 'F' is the inaugural 7,200 square-foot, six-unit inline retail building at the South Bridge development in St. George, Utah and represents the first phase of 112,000 square feet of total retail space. As the first building, it established the architectural vocabulary, scale, and material standards for all subsequent construction. The design prioritized a consistent, aesthetically pleasing appearance, especially given its high-visibility, 360-degree exposure to traffic, which required equal design consideration for all four facades. The building's design was significantly influenced by the anchor tenant and engineered to accommodate their processes and ensure their prominent visibility.

Cutalong Golf Clubhouse

Golden Fork Award Winner

The Clubhouse is the arrival, destination, golf access, public interface, operations, maintenance, restaurant, and retail space for the resort. Rough sawn, heavy timber and rustic finishes were used to pay homage to the old mine once located on site. The clubhouse is organized and oriented to the course and offers views down fairways and to nearby stay and play units. A large wrap around deck provides a connection to the course while dining and relaxing under covered roof. Main level includes a large lobby, pro shop, offices, kitchen, indoor & outdoor dining, with back-of-house items out of view from the course. Cart storage and other utility spaces are located below grade.

Evangelical Community Hospital

Healthcare - MRI Unit

Enhancing Patient Care Through Thoughtful Design

This project involved the full renovation of the hospital's MRI Suite, along with a strategically designed connector addition to the main facility. To ensure uninterrupted patient service during construction, the addition was planned to seamlessly accommodate a mobile MRI trailer—maintaining continuity of care for patients during construction.

Close collaboration with the Owner's suppliers and vendors was essential to integrate the latest MRI technology into the space. Equally important was our focus on the end user's workflow: every design decision prioritized efficiency, safety, and patient comfort, resulting in a space that supports both advanced imaging capabilities and an improved patient experience.
