Healthcare

Evangelical Community Hospital
Administration Suite

Hospital Renovation & Space Optimization

This renovation project reimagined a portion of an existing hospital wing into a more functional, efficient, and professional environment for the administrative team. By collaborating with each department in administration, we explored creative design solutions that maximized efficiency, improved comfort, and supported the hospital's mission of exceptional care.

The final design balances functionality with a welcoming atmosphere, transforming existing constraints into opportunities for better workflow and enhanced patient experiences. The result is a thoughtfully planned environment that not only meets today's needs but also adapts to future demands.

Healthcare

Evangelical Community Hospital

MRI Unit

Enhancing Patient Care Through Thoughtful Design

This project involved the full renovation of the hospital's MRI Suite, along with a strategically designed connector addition to the main facility. To ensure uninterrupted patient service during construction, the addition was planned to seamlessly accommodate a mobile MRI trailer—maintaining continuity of care for patients during construction.

Close collaboration with the Owner's suppliers and vendors was essential to integrate the latest MRI technology into the space. Equally important was our focus on the end user's workflow: every design decision prioritized efficiency, safety, and patient comfort, resulting in a space that supports both advanced imaging capabilities and an improved patient experience.

Geisinger Health System
Biocontainment Unit

Innovating Healthcare | Design for Specialized Care

Innovating Healthcare Design for specialized care through a transformation of an existing hospital area into one of Pennsylvania's first Biocontainment Units—setting a new standard for safety, functionality, and patient care. Through extensive collaboration with Geisinger specialists and facilities personnel, we explored multiple design options to address the unit's unique and highly specific requirements. A series of conceptual planning sessions ensured that every detail supported a safe, efficient, and patient-centered environment. The result is a cutting-edge healthcare space designed to protect patients and staff while advancing the hospital's mission of specialized care delivery.

Richards Orthodontics

New Clinic

A Synergy of Form and Function

Designed to bridge clinical precision with residential warmth, the Richards Orthodontics facility redefines the patient experience through light-filled architectural massing. The building features deep overhanging eaves and a sophisticated masonry palette that grounds the structure to its landscape. Inside, the layout prioritizes circular efficiency and staff responsiveness. At the heart of the practice, an open-concept treatment bay utilizes large ribbon windows to transform the clinical environment into a space of openness and calm. The floorplan cleverly separates "business" from "care." The administrative wing manages patient intake in a welcoming environment, while the central core houses high-tech sterilization and laboratory zones for rapid staff access.
